Search term audit

Client: **Gimme Care** Date: **2026-05-27** Vertical: **Ecommerce — GLP-1**

51%

Needs attention — roughly half of search-term governance is working

60d main · 120d n-grams · 8d lag · 451,183 terms (Period A) · 406,598 (Period B)

Executive read

51/100 means roughly half your search-term governance is working, but more than a quarter of evaluated spend (~\$1.15M of ~\$4.2M) is on queries that never converted in-window — and the biggest dollar risk is not "bad keywords" but core product terms that convert at CPA well above target. That pattern matches your business note that account CPA is climbing without a confirmed root cause.

Do these three things this week, in order:

First, **do not run a broad negation sweep on core GLP-1 terms** (`compounded tirzepatide` , `glp 1` , `cheapest tirzepatide` , `zepbound` , etc.). **489 of 638 "underperforming" terms are core-relevant** (~\$785k spend flagged) — these are

conversion/LP/intake problems, not traffic-quality problems. Route to `/lp-auditor` and `/offer-auditor` and validate intake CVR before blaming search terms.

Second, **negate competitor and navigational waste that is clearly off-brand** — top zero-conversion examples include `coreagerx`, `yucca health`, `hims tirzepatide`, `weightrx`, and competitor/review n-grams (`trimrx`, `slimdownrx`, `com reviews`).

~\$1.15M non-converting spend (27.4% of term spend) — a large share is safe structural cleanup after human review.

Third, **attach `Search_Brand` to your shared negative lists** (only active campaign missing shared-list linkage).

What is NOT a problem: zero negative conflicts (ST-D08), zero repeated negative consolidation debt (ST-D09/D10), zero legacy `+modified +broad` negatives (ST-D11), no close-variant drift (Module 4 clean), no active PMax search-term leakage.

`Search_Tirzepatide_Semaglutide` and `Shopping_GLP-1_Subs` already have campaign-level negatives.

No fresh peer audit reports existed in context at time of audit — upstream tracking and LP checks were flagged as needed (tracking audit subsequently completed 2026-06-09 at 84%). Score trend: baseline run — no prior score in log.

Diagnosis

The problem is at the Business + Conversion layer first, Traffic cleanup second.

Core-intent queries are spending heavily and converting below the effective CPA ceiling (~\$458 at 1.5× \$305 campaign inline target), which explains climbing account CPA better than "we need more negatives." Competitor/navigational queries are real waste (~27% non-converting spend share) but are smaller than core-term inefficiency. Start with intake/LP and ad group tCPA alignment (\$650 in account vs \$450 strategic target), then run a scoped negation cycle on non-core competitor terms.

Evidence ladder

Measurement layer ACTIVE

No `tracking-audit.md` on file at audit time — cannot rule out attribution lag or conversion undercount → H1 (unverified) BLOCKING

Primary conversion: First Time Purchase (GTM) - SST; 8-day analysis lag applied → H1

Business layer ACTIVE

Account CPA ~\$409 vs \$400 target; NB ad group tCPA \$650 vs \$450 strategic goal (changelog May 22) → H2

Business.md: intake form CVR suspected bottleneck, root cause not identified → H2

489/638 underperforming terms are core product language → H2

Traffic layer ACTIVE

27.4% of term spend (\$1.15M) on zero-conversion queries → H3

Top non-converters: competitor/navigational (`coreagerx` , `hims tirzepatide` , `yucca health` , `weightrx`) → H3

27 non-converting n-grams + 93 inefficient n-grams (non-core: `trimrx` , `slimdownrx` , `com reviews` , Spanish `para / de`) → H3

`Search_Brand` not linked to shared negative lists → H3

2,879 promotion candidates; keyword coverage ratio 40% → H3

Actions

 **Investigate first** — blocking, do not negate core terms yet

HYPOTHESIS	SKILL	WHAT THIS UNBLOCKS
Conversion / intake bottleneck — business.md flags climbing CPA with unconfirmed constraint	/lp-auditor on intake funnels	Confirms whether core GLP-1 term underperformance is a LP/intake problem before any negation
Tracking confidence — no recent tracking audit on file (at time of this report)	/tracking-specialist	Validates conversion signal before large negation cycles (tracking audit completed 2026-06-09 at 84%)
Target alignment — ad group tCPA \$650 vs \$450 strategic target; recent increases in changelog	/strategy-specialist	Ensures underperformance flags are based on the right CPA ceiling before acting on them

Structural fix needed — route upstream, never negate

ISSUE	TERMS	FLAGGED SPEND	ROUTES
489 core-relevant underperforming terms — e.g. <code>compounded tirzepatide</code> (\$60k, CPA ~\$470), <code>glp 1</code> (\$33k, CPA ~\$624), <code>cheapest tirzepatide</code> , <code>zepbound</code> . Root cause: LP, offer, pricing presentation, intake UX — not traffic quality	489	~\$785k	<code>/lp-auditor</code> , <code>/offer-auditor</code> — do NOT negate

Act now — safe regardless of cascade state

#	ACTION	TERMS	OPTIMIZER COMMAND
1	Review then negate competitor / navigational non-converters (<code>coreagerx</code> , <code>hims tirzepatide</code> , <code>yucca health</code> , <code>mochi health</code> , <code>brello</code>)	Review list	<code>/search-term-optimizer negate</code>
2	Review then negate 27 non-converting n-grams — non-core only (<code>weightrx</code> , <code>com reviews</code> , <code>slimdownrx</code> , <code>trimrx tirzepatide</code>); exclude <code>fda approved</code> / <code>zepbound tirzepatide</code> if core-intent	27	<code>/search-term-optimizer ngrams</code>
3	Review then negate 93 inefficient n-grams — confirmed off-brand patterns (<code>yucca</code> , <code>slimdownrx</code> , <code>trimrx tirzepatide</code>)	93	<code>/search-term-optimizer ngrams</code>
4	Link <code>Search_Brand</code> campaign to shared negative lists (<code>Search Term Exclusions</code> + n-gram lists)	1 campaign	<code>/search-term-optimizer list hygiene</code>
5	Audit 2,260 safe-list conflicts — shared list vs protected terms	2,260	<code>/search-term-optimizer list hygiene</code>
6	Promote 2,879 high-performing search terms to keywords — after upstream cascade is clear; respect match-type setup; watch 168 cross-campaign duplicates	2,879	<code>/search-term-optimizer promote</code>

Do NOT negate — relevant / profitable, must stay

- Core GLP-1 and treatment terms** (`semaglutide`, `tirzepatide`, `glp`, `zepbound`, `mounjaro`, `compounded *`, `cheapest *` when on-brand) — fix the conversion path first, the traffic is legitimate
- Terms flagged only because campaign inline tCPA (\$305) is below actual ad group targets (\$650)** — reconcile bidding targets before using flags as negation justification; these terms may be performing correctly against the true target

Module details

Module 1 — Search term quality

5/25 — Critical

ID	DIAGNOSTIC	VERDICT	EVIDENCE
ST-D01	Irrelevant spend %	FAIL	27.4% of \$4.20M (\$1.15M non-converting spend)
ST-D02	Non-converting terms	FAIL	26,854 terms, \$1.15M spend
ST-D03	Underperforming	FAIL	638 terms (489 core-relevant — see Structural fix needed)
ST-D04	Foreign language	WARN	Spanish clusters in n-grams (para , de , inyecciones)
ST-D05	Trending terms	INFO	23,209 emerging terms identified — monitor for promotion candidates

Module 2 — Negative keyword coverage

19/25 — Good

ID	DIAGNOSTIC	VERDICT	EVIDENCE
ST-D06	Campaigns without negatives	PASS*	0 active spend campaigns missing negatives (*6 paused/legacy also show gaps — ignore unless reactivated)
ST-D07	Campaigns without shared lists	WARN	Search_Brand active campaign not linked to shared negative lists; 6 paused also unlinked
ST-D08	Negative conflicts	PASS	0 conflicts found
ST-D09	Repeated ad-group negatives	PASS	0 repeated negatives found
ST-D10	Repeated campaign negatives	PASS	0 repeated negatives found
ST-D11	Legacy +modified +broad	PASS	0 legacy BMM negatives
ST-D12	Catalog completeness	WARN	Competitor/review/discount patterns under-covered relative to spend on those query types

Module 3 — N-gram analysis

10/20 — Needs attention

ID	DIAGNOSTIC	VERDICT	EVIDENCE
ST-D13	Non-converting n-grams	WARN	27 n-grams identified
ST-D14	Inefficient n-grams	FAIL	93 n-grams above CPA threshold
ST-D15	Shared list staleness	INFO	Manual review recommended to confirm lists reflect current n-gram findings
ST-D16	Volume concentration	INFO	Prioritise competitor/review n-grams first by spend volume

Module 4 — Close variant monitoring

15/15 — Excellent

ID	DIAGNOSTIC	VERDICT	EVIDENCE
ST-D17	Performance drift	PASS	0 close-variant drift candidates
ST-D18	Spend share	PASS	0 high-spend unintended variants
ST-D19	Unintended expansion	PASS	No expansion flags detected

Module 5 — Promotion & PMax

0/11 — Critical

ST-D25/D26 skipped — no PMax search term data available. Module scored out of 11.

ID	DIAGNOSTIC	VERDICT	EVIDENCE
ST-D20	High performers not keywords	FAIL	2,879 converting search terms not yet promoted to keywords
ST-D21	Duplicates across campaigns	FAIL	168 terms appearing in multiple campaigns — may split budget or cannicalise
ST-D22	Coverage ratio	FAIL	40% of converting terms are already keywords — 60% promotion gap
ST-D25	PMax brand query %	SKIP	No PMax search term data available
ST-D26	PMax / Search overlap	SKIP	No PMax search term data available

Next recommended action

Confirm intake CVR root cause via `/lp-auditor` before running any negation cycles — 489 core-relevant underperforming terms (~\$785k flagged spend) are a conversion problem, not a traffic problem. Safe actions (competitor negation, shared list linkage) can run in parallel

on non-core terms using `/search-term-optimizer negate` and `/search-term-optimizer ngrams` .
