

Amble emergency med kits

Eight scenario-based kits — physician-led, shipped to your door if prescribed. Simple intake, faster time to prescription, and affordable flat pricing.

Just in Case

\$285

Your everyday home preparedness kit — nine physician-prescribed medications for the situations families actually worry about: respiratory and sinus infections, urinary tract infections, Lyme and skin infections, traveler's diarrhea and GI illness, dental infections, parasitic exposure, yeast infections, nausea, and cold sores or shingles.

Think of it as a complete medicine-cabinet upgrade beyond bandages and OTC pain relievers — built for households who want real emergency medications on hand before urgent care is packed or the pharmacy is closed.

Mayday

\$325

Built for travel — ten medications covering the health problems that ruin trips abroad: urinary infections, traveler's diarrhea, altitude sickness, persistent cough, nausea and vomiting, jet lag and sleep disruption, and common skin and respiratory infections.

Ideal for flights, cruises, road trips, and international travel when you want prescription backup without hunting for a clinic in an unfamiliar place.

Viral Ick

\$325

Seasonal viral preparedness — seven prescription medications plus a nebulizer for when “something is going around.” Includes an influenza antiviral, medications for viral respiratory illness, bronchospasm relief, inflammation support, HSV outbreak treatment, and antibiotic backup.

Designed for flu season, respiratory outbreaks, and households who want more than cough syrup and fever reducers when illness hits hard.

Cold Reaper

\$325

Cold and flu symptom stack — eight items focused on feeling better fast while covering bacterial complications. Includes pain and fever relief, allergy support, anti-nausea medication, a steroid burst for inflammation, antibiotic backup, and immune support with vitamin C.

A practical kit for cough, congestion, and flu season — symptom relief up front, prescription backup if a bacterial infection develops.

Breathe Easy

\$325

Respiratory and allergy kit — seven medications for breathing problems and seasonal triggers. Includes a rescue inhaler, nebulized bronchodilator, airway inflammation treatment, daily allergy prevention, antifungal cream for rashes, and antibiotic backup for respiratory infections.

For anyone managing asthma, allergies, hay fever, or reactive airways who wants emergency respiratory medications beyond an OTC inhaler or antihistamine.

Oh Sh*t

\$345

Radiation preparedness — three prescription medications for nuclear and radiation emergency scenarios. Includes potassium iodide for thyroid protection, Prussian Blue for internal contamination, and anti-nausea medication.

A focused kit for households and communities preparing for radiation exposure events — serious preparedness for a serious scenario.

Ouch Pouch

\$425

Wounds, trauma, and allergic emergency — nine items for field injuries and allergic reactions. Includes topical infection treatment, pain and fever relief, motion sickness support, oral antibiotic backup, and an epinephrine auto-injector for severe allergic reactions.

Built for hunters, ranchers, outdoor enthusiasts, and families who need more than a drugstore first-aid kit when care is hours away.

Panic Pack

\$945

Maximum coverage — nineteen prescription medications plus eight trauma and first-aid supplies. Full antibiotic spectrum, viral and HSV treatment, respiratory emergency inhaler, epinephrine auto-injector, radiation protection, pain and muscle spasm relief, GI support, glucose for low blood sugar, and wound-care gear including tourniquet, gauze, steri-strips, and cold packs.

The comprehensive kit for families, rural households, and serious preparedness — everything in one place when you want the deepest medical backup plan available.

All kits require a licensed provider review after a simple online intake. Medications are dispensed only if prescribed. Not a substitute for emergency care or routine medical treatment. HSA/FSA eligible where applicable.
